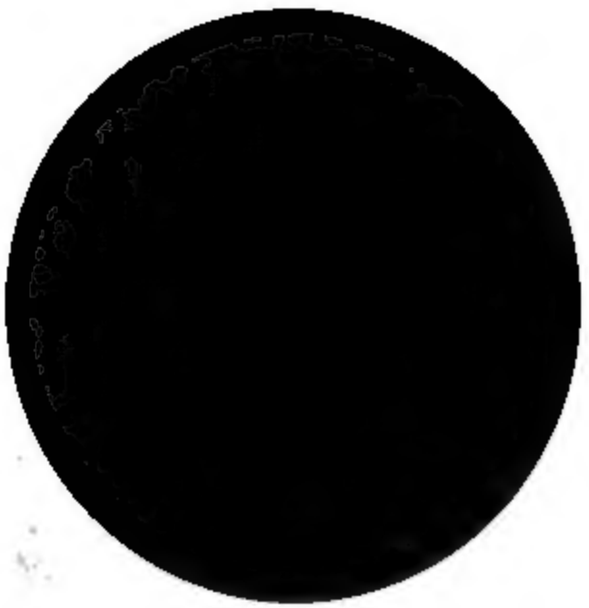
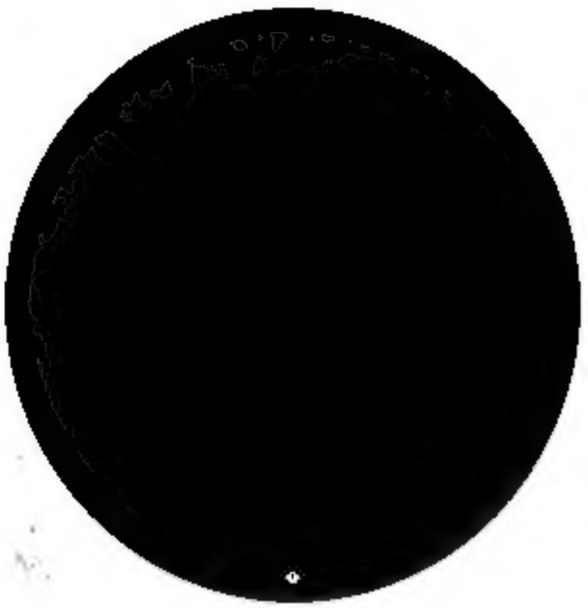
Star.

by Earth Floor.

Star had everything. The beginning,

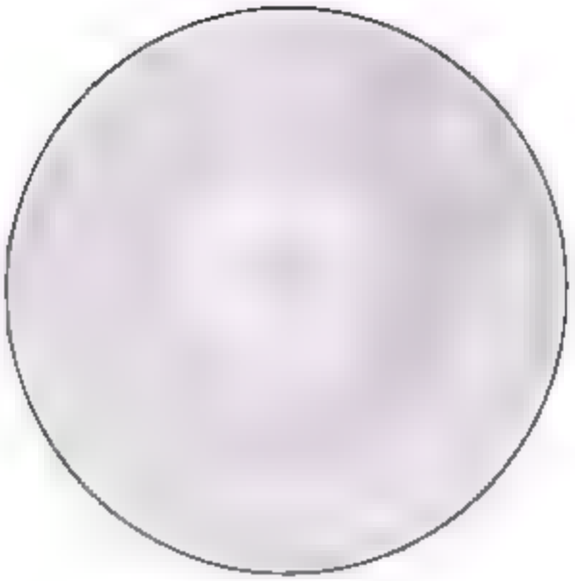


and end. It spun, and sent up-wind.



It spun again, and little gems came out, that beamed rocks as far as it could.

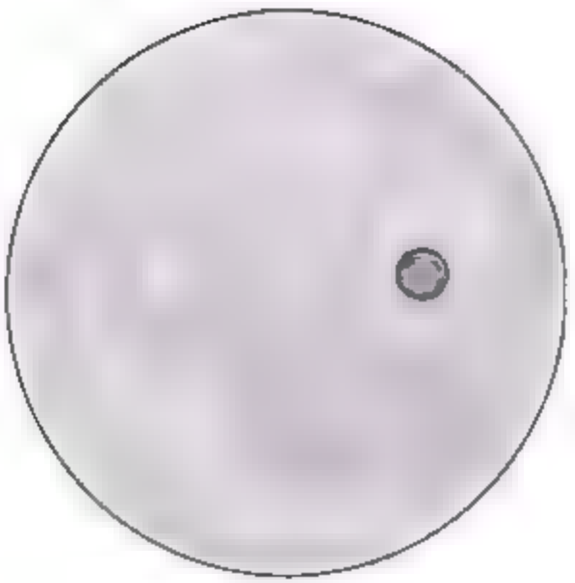
Then, the warm spot came around, and beamed up water.



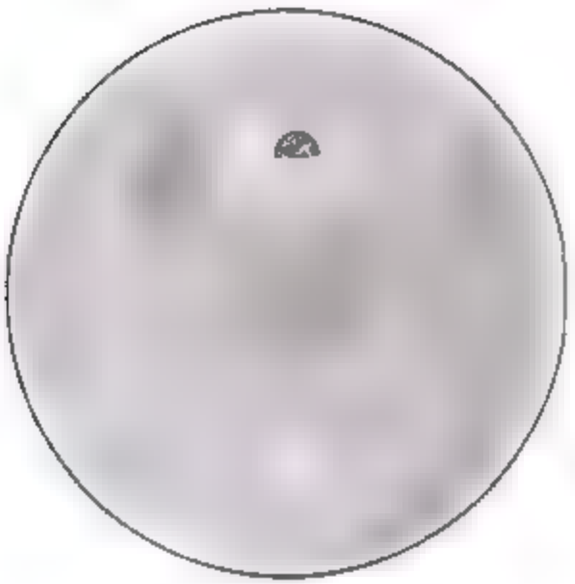
Next, was mountain island, which made time, and beamed light.

Having given water before, when the warm spot came again, it made the world red, orange, yellow, and then beamed green plants.

The island came out during warm, and beamed air, and a new time.



On the next spin, a big wave crashed onto the island, and star beamed side-wind.



Finally, island went over warm, and life crawled onto it.

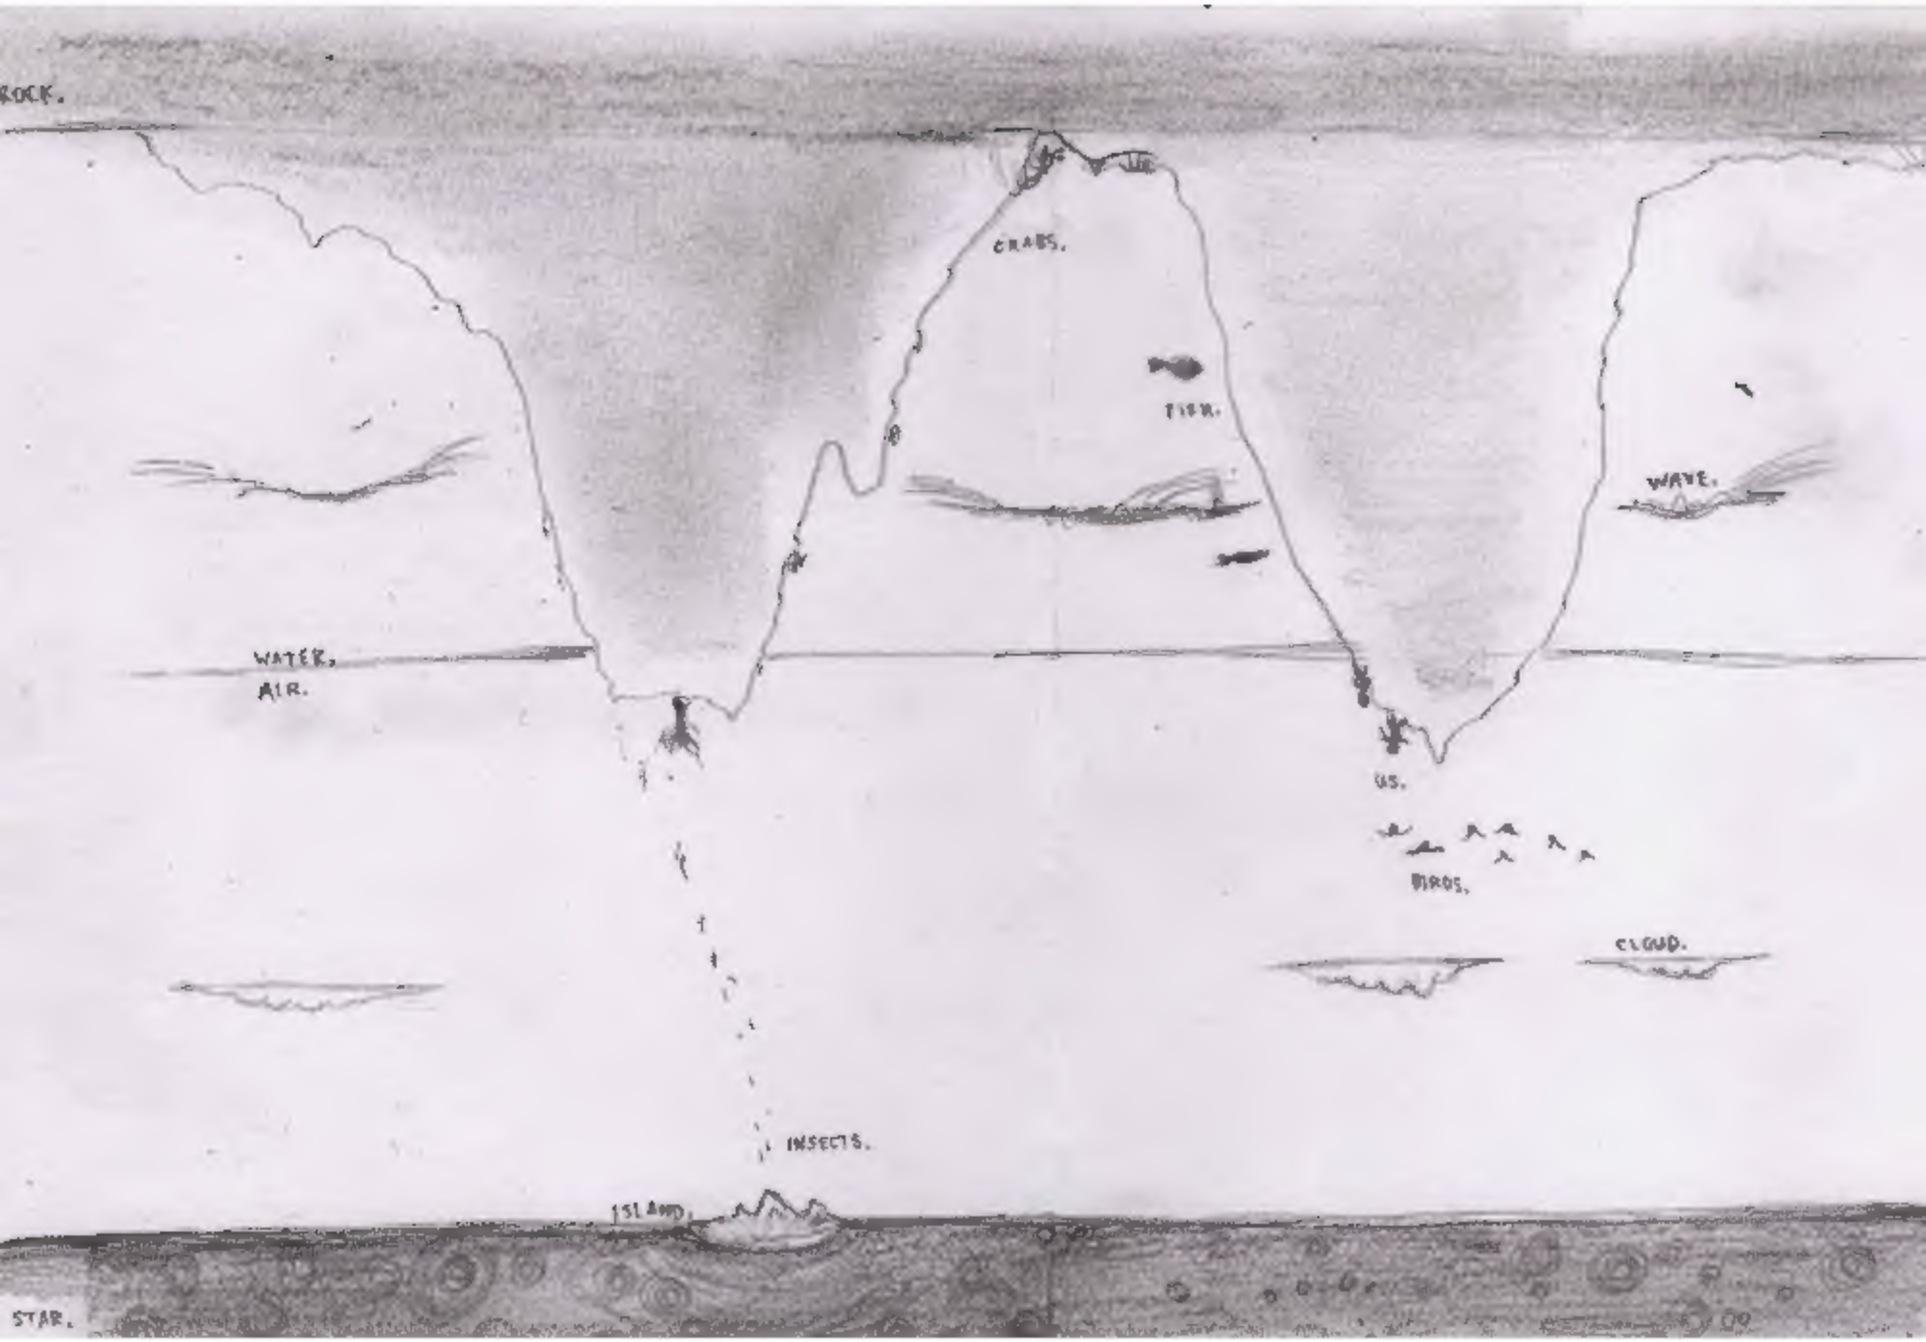
However, sometimes the island falls into Star, and end becomes beginning!

Tiny life flew to Earth, and then hung onto the plants and rock. Be careful not to step on one!

They eventually climbed into the water above, and became crabs. The crabs have not moved from the top of the world!

With no where to go, the crab babies became fish, and these fish fell out of the water beneath them!

Fish babies became birds that are practicing flying back to mountain island, but before they did, they made us, the hairy mammals, to watch the land.



ROCK.
CRABS.
FISH.
WAVE.
WATER.
AIR.
US.
BIRDS.
CLOUD.
INSECTS.
ISLAND.
STAR.

“What happens when we get back to the island?”

No one know it!

“What do we do?”

Know!

2026.
